# appropriations of state tax funds for operating expenses of higher education 1975-76

m. m. chambers

office of research and information national association of state universities and land-grant colleges PREFACE

The National Association of State Universities and Land-Grant Colleges (NASULGC) is pleased to publish this seventeenth edition of Dr. M. M. Chambers' annual report on state tax appropriations for operating expenses of higher education. Over the years, Dr. Chambers has coordinated a nationwide network of correspondents who help in this useful collection and dissemination of data summarizing state support for higher education.

This support continues to be the most critical factor in the financing of the nation's public colleges and universities-more so today than ever before as inflationary pressures annually pose the troublesome question: Will there be enough funds available to meet required expenditures?

The latest Chambers survey shows that legislatures in all 50 states appropriated for fiscal 1975-76 a larger sum for net state tax assistance for all higher education than the comparable figure of two years earlier. The gains—nationwide and for all of higher education—are encouraging although, as Chambers points out, less than would have been desirable in the long run public interest.

State appropriations for a large number of state and land-grant universities failed to keep pace with the rise in the Higher Education Price Index over the past two years. The index, constructed and brought up to date annually by D. Kent Halstead of the Department of Health, Education and Welfare, measures both wage and price changes in 10 categories involving the types of goods and services which are purchased by universities and colleges. It applies to all institutions of higher education rather than to any single segment.

Final index figures covering the 1975 fiscal year compiled by Halstead show an unprecedented 8.6 percent jump from 1973-74 to 1974-75.

For almost half the state and land-grant universities the gap between state appropriations and the soaring index meant that revenue was not sufficient to cover the cost of necessary goods and services.

In addition, the majority of these institutions continued to face demands to educate more students.

The adequacy of revenue in meeting the needs of all students served by state and land-grant universities has been analyzed by the NASULGC Office of Research and Information by calculating total income per student for each of the past two fiscal years. This takes into account the 8.6 percent rise in the Higher Education Price Index. The analysis of data for 94 state and land-grant universities and colleges for which comparable information on both enrollment and revenue were available revealed that the amount of income per student dropped from \$4,138 in 1973-74 to \$4,045 in 1974-75 when the effects of inflation were considered. This means that state and land-grant universities had an average of \$93 less per student in 1974-75 than they had in 1973-74.

Typical of the critical financial problems faced by these institutions is the situation at the 27-campus University of Wisconsin System. It faces a year of operation with a state approrpiation which provides \$6.8 million less in general purpose revenue (excluding increased compensation) than was available in 1974-75. At the same time, the university is up against record enrollments. University administrators, in submitting their annual budget to the University of Wisconsin Board of Regents, noted: "The proposed budget is an attempt to manage as responsibly as possible with resources which are not equal to the task required for us... For the record, we would have the Regents know that if the present deficiencies are not soon rectified and if the state is unable or unwilling to provide the conditions and resources which make possible the continuation of quality education, the Board cannot long avoid the choice—the obvious, yet unfortunate, choice—between quality and access."

In an attempt to survive in a time when revenue is not keeping pace with inflation, public universities and colleges have instituted extensive campaigns to cut costs.

But, as the Wisconsin report to the state Regents points out, the hard choice is approaching: Will financial cutbacks force a comparable cutback in the quality of the teaching, research and extension efforts of state and land-grant universities which have been unique features of U. S. higher education and the models for higher education systems around the globe?

Garven Hudgins Director, Office of Research and Information National Association of State Universities and Land-Grant Colleges Washington, D. C. 20036

#### INTRODUCTION

If one were addicted to the use of five-syllable words, and also to the sometimes mystifying jargon of education researchers, one might say this brochure reports the seventeenth annual segment of a "longitudinal" study of net state tax support of operating expenses of higher education in the United States.

I write briefly of this seventeenth annual summary with especial verve and enjoyment, because it is possible to announce that although the fiscal year 1974-75 was fraught with more panicky apprehension and uncertainty regarding the current and future condition of the national economy than any of the preceding forty years, not one of the fifty state legislatures failed to appropriate a larger sum for net state tax support of all higher education for fiscal year 1975-76 than the comparable figure of two years earlier (for fiscal year 1973-74).

The nationwide weighted average rate of gain for all fifty states over the two-year period turns out to be approximately 28 percent. The comparable two-year gains as of each of the five consecutive years 1972-76 inclusive are respectively 24, 23, 25, 29 and 28 percent. Each is higher than the rate of price inflation current at the time, and represents some real gains, though less than would have been desirable in the long-run public interest.

One must note that these figures are nationwide and for all higher education, and that there is always wide variation among the states and even wider variance among institutions. For example, for fiscal year 1975-76 twelve states show two-year gains of less than 20 percent, the lowest being New Jersey, with only 4 percent. At the other end of the continuum, twelve states made two-year increases of more than 40 percent – reminiscent of the expansive years of the latter half of the 1960's.

Almost everywhere the local public two-year community colleges show larger increases in state support than the four-year state colleges or the large state universities, some of which are in standstill or backsliding condition because their percentages of gain are less than the rate of price inflation, to say nothing of the generally steady but modest increases in student enrollment.

#### RECOVERY FROM TEMPORARY SLOWDOWN

Misled by sensational news of declines in enrollment and support in a relatively small number of exceptionally unfortunate institutions, some public and some private, many persons have lost sight of the continued growth in the nationwide picture. Since 1971 the tendency among speakers and writers has been to proclaim gloom and doom for the future of higher education in the United States. The air resounds with lamentations. It would be more accurate to perceive the most recent five years as a period of temporary slowdown (with no actual nationwide decline), from which some recovery is already in progress.

The statistics in this present brochure attest that, by and large, the fifty state legislatures are inclined-.-to rally to continued and increasing state tax support of higher education, even under the conditions of unusual psychological stress which have characterized the most recent two years in this nation.

The figures are testimony that the state legislators are generally persons of good sense and good will toward higher education; that they are aware of the significant short-term and long-term benefits that accrue to the whole society from more and better higher education for more people. This ideal has by no means lost the confidence of the public. It is due for a revival of unprecedented vitality. It is a durable and leading element of the American Dream.

#### THE AIR IS CLEARING

Meantime the appearance of allegedly "objective studies" (whose sources I do not name here for the sake of courtesy and comity), predicting that total enrollments will eventually decline to half what they are today, can be easily tolerated. The same is true of a flood of writing which stresses the asserted "declining value of college-going," persistently viewing higher education exclusively in the narrow context of private pecuniary benefits to the individual and ignoring the non-pecuniary gains for the individual and the fact that all jobs tend inexorably to be upgraded, as well as the vastly more important public benefits for the whole society.

Equally tolerable (if not taken seriously) are the dust gathering reports of prestigious commissions, committees and task-forces solemnly recommending that tuition fees be drastically raised in public colleges and universities, and that huge and complex national and state schemes of student financial aids be fabricated on an unprecedented scale. It is quite difficult for citizens and legislators to see the logic of fixing tuition fees at a level which will exclude most students from middle-income backgrounds, and then screening them through a complicated "welfare" process which would require a vast and far-flung organization of student aid functionaries to administer it, not to mention the injustices involved.

The gist of it is the misconceived idea that "those who are able to pay high tuition fees, should pay," ignoring the truer concept that the advancement of higher education is a public obligation resting upon all citizens and a public service to be expected of all students. Formal study is not a parasitic nonproductive waste of time, but a most fruitful form of public duty. Nearly all students in most other countries of the world are paid stipends rather than being charged prohibitive fees.

The eminently sensible recommendations of Howard R. Bowen and a fast-growing company of other economists and educators (not to omit increasing numbers of intellectually awakened students), that tuition fees in public universities and colleges be kept low or non-existent, and that student aid systems for the economically deprived students of both sexes and all races be developed on an increasing scale, but not on the overwhelming scale that a high-tuition-fee system would necessitate, seem likely to be implemented. We overlook the few hopelessly reactionary economists who insist that all students should pay the full cost of their instruction. They belong in the eighteenth century.

In the nationwide arena of policy-making concerning higher education, there are perceptible signals that divisiveness is diminishing, that some of the more fatuous proposals are sinking from view, and that a reasonable consensus may be reached which will enable this greatest of all public service enterprises to expand and improve toward higher potentials for the public good.

The report which follows represents a compilation of state reports which are printed monthly as appropriations are finalized in the newsletter, GRAPEVINE. The annual report has been reproduced and distributed by the National Association of State Universities and Land-Grant Colleges for each of the 17 fiscal years since 1960.

My gratitude to my correspondents in fifty states, my universities, my graduate students and all others who have given me ideas, is well known but can not be too often proclaimed. Especial mention is due Ms. Gwen Pruyne of Illinois State University, my current collaborator.

November, 1975

#### WHAT THE FIGURES ARE INTENDED TO MEAN

The data for this report are supplied by key persons in each state who report them to the small monthly mimeographed newsletter GRAPEVINE. Their cooperation is indispensable. The ground-rules used to achieve an approach to uniformity of reporting are enumerated below. Diversities of practice among the fifty states make it impossible to eliminate all inconsistencies and accomplish absolute comparability among states and among institutions. We emphasize that comparisons are of limited usefulness, but have value if correctly interpreted.

(1) We exclude appropriations for capital outlay.

(2) We exclude any sums appropriated which clearly originated from sources other than state taxes, such as student fees or other institutional receipts. (Some states capture these non-tax funds for the state treasury, and appropriate them to the institutions as a part of the total appropriations for operating expenses; but many states do not. Hence, it is necessary to peel off the non-tax institutional receipts in order to report appropriations of state tax funds.)

(3) We include any sums appropriated for the annual operating expenses of the institutions of higher education, even if appropriated to some other agency of the state for ultimate allocation and payment to the institutions. (Some states appropriate, either occasionally or habitually, sums for such items as faculty fringe benefits under conditions such that only the total made available at the time can be known, and the actual allocations to several institutions cannot be known until after the end of the fiscal period.)

(4) We include any pre-allocated state taxes whose proceeds are dedicated to • any institution of higher education, bypassing the process of periodic appropriation the by legislature.

(5) We would like to include, whenever practicable, separate appropriations for medical centers (including schools of medicine, dentistry, nursing, teaching hospitals and other appropriate appurtenances of a medical education complex); separate appropriations for agricultural experiment stations and cooperative agricultural extension services; and separate appropriations for branch institutions regional campuses and any other off-campus outposts of universities or land-grant institutions. We cannot request this except in instances where it is easily practicable and would hot involve delay in reporting.

(6) We include sums derived from state tax funds and appropriated for state scholarships. This is regardless of whether such scholarships are tenable in public or private institutions, or tenable within or without the state.

(7) We include sums appropriated to statewide governing or coordinating boards regardless of whether for the expenses of the board or for ultimate allocation to the institutions.

(8) We emphasize that the data in this report are in preliminary form and subject to verification and change. In several of the state tabulations the items may not add up to the indicated total. Minor discrepancies may be attributed to rounding. Where the discrepancies are substantial, the investigator, while reasonably confident of the total, may have encountered difficulty in obtaining from his sources consistent reports of some items. To check and verify every item would be a costly and time-consuming project which would delay the publication of this report beyond the time when it is most useful.

(9) If any funds from federal general revenue sharing are applied to operating expenses of higher education, they are meant to be <u>excluded</u> here. This summary is intended to include only net state tax funds.

\* IUPUI is the acronym for Indiana University-Purdue University at Indianapolis, which includes the large Indiana University Medical Center and other Indiana University units: a Law School, and schools of Liberal Arts, Social Service, Fine Arts, and Gymnastics, as well as the Indianapolis campus of Purdue University.

- \*\* This involves the operation and further planning of a statewide system of decentralizing medical education by having it accomplished in part at colleges and hospitals in various cities, with the entire system in constant and close communication with the Medical Center at Indianapolis.
- \*\*\* IUPU at Fort Wayne is a dual campus of Indiana University and Purdue University, in operation as such for a decade or more. The sums entered under each of the main universities for this item are approximations, adding up to the total of \$7,653,000 for the Fort Wayne dual unit.
  - + Indiana Voc-Tech College is a statewide agency authorized to provide vocational education by various means, including establishing and operating postsecondary schools or by contracting with private colleges or other agencies. It is currently operating several small vocational-technical schools in various cities and towns in the state.

(Continued from preceding page) Ind.

- ++ Vincennes University is a two-year community college, now largely supported by the state, but partly by the county. It has a history of a century and a half, having once been a four-year private college.
- # To be allocated to institutions in instances where enrollments exceed estimates on which the budget was based.
- ## The telecommunication system is chiefly an operating tool of the statewide medical education plan described in Footnote (\*\*), in preceding column.

#### MASSACHUSETTS

When this document went to press in mid-October 1975, it was reported that appropriations of state tax funds for annual operating expenses of higher education in Massachusetts for fiscal year 1975-76 had not been made, and probably would not be enacted before December.

Our informed correspondent also noted that, pending the appropriation, all state services were operating on the basis of 90 percent of the sums appropriated for 1974-75.
